Professional Summary

Site Reliability Engineer with 15+ years of experience, I automate infrastructure using DevOps CI/CD pipelines leveraging scripting tools like PowerShell, Python, Ansible, GitHub Actions, Containers etc. I build monitoring and alerting systems using tools like Python, PowerShell, Flask, Prometheus and Grafana for both On-Prem and Cloud platform (AWS & Azure).

Skills

Databases: SQLServer, PostgreSQL, SQLite, RDS, Azure SQL, Managed Instance, Aurora

Programming Languages: SQL, PowerShell, Python, JavaScript, HTML / CSS, Shell Scripting

Tools and Frameworks: Git, Linux, Ansible, Flask, Django, GitHub Actions, VS Code, Grafana, Prometheus, KVM Virtualization, Container, Podman, Docker, Ubuntu, RHEL, PowerShell DSC, Infrastructure as Code (IaC)

Cloud Platforms: AWS, Azure

High Availability & Disaster Recovery: Clustering, Availability Groups, Mirroring, Log Shipping, Replication, Disk Stripping, RAID, Multi Subnet Setup

Languages: English (proficient), Hindi (native)

Certifications

- | | |
|--|----------|
| • Microsoft Certified Professional - Database Querying | Oct 2013 |
| • Microsoft Certified Professional - Database Administration | Dec 2013 |
| • BrentOzarUnlimited Mastering SQLServer | Nov 2022 |
| • SQLSkills Blackbelt Professional | Jun 2023 |

Experience

Principal Solution Architect - SQL Server Tessell **02 2026 - 09 2026**

- Added enhancements to support Change Data Capture & transactional Replication
- Added Monitoring feature for Data & Log file growth using SQLExporter, Prometheus & Victoria Metrics
- Designed CentOS-2-RHEL Migration automation using Python & Ansible for PostgreSQL

Senior Site Reliability Engineer (DevOps) AngelOne **02 2022 - 02 2026**

- Developed DB AI Agent using Ollama (LLM) and LangChain for Performance Monitoring & Troubleshooting
- Automated multi datacenter HA & Standalone PostgreSQL setup using Ansible
- Automated disk, connectivity, patroni health, and backup alerts for PostgreSQL servers using python
- Saved 80 hours/week SRE effort with single click Github Action based PostgreSQL Cluster deployment & Configuration using Ansible Playbook.
- Baselined all windows & linux servers using Prometheus and Grafana
- Created Github Repo based baselining of servers to ease monitoring and baselining using Prometheus and Grafana
- Automated common database teams activities like installation, configuration, monitoring and alerting using PowerShell, Flask, Python, TSQL, Grafana, and PagerDuty for On-Prem and Cloud Managed Instances

Database Reliability Engineer Arcesium **05 2020 - 02 2022**

- Resolved 100s of incidents by moving 38 TB AG databases with PowerShell.
- Automated/Upgraded 30 Critical SQLClusters/AGs in 12 hours avoiding week long downtime.
- Improved database reliability with automated ScriptOut of entire SQLServer Instances for Disaster Recovery.
- Built automations to prevent common issues like tempdbSaver, LogSaver etc.

Database Administrator TiVo **02 2018 - 05 2020**

- Saved 40+ hours by automating SQLServer deployment and configuration using PowerShell.
- Reduced 80% transactional replication issues with latency infra.
- Reduced 80% performance incidents by building Delta Index Defragmentation automation for replicated & HADR databases.

Senior SQL DBA United Health Group **10 2016 - 02 2018**

- Saved \$1 million/year via DB Space Capacity Automation.
- Improved 50% performance issues with reduced VLDBs maintenance time.

Technical Lead	Ericsson Global	06 2015 - 10 2016
• 3x Performance Improvement via advanced query optimization like Recursive CTE and Table Partitioning. • Lead 18+ developers for best practices and guidelines.		

SQL DBA Developer	TATA Consultancy Services	03 2011 - 06 2015
• Moved 250+ large tables with each having billions of records using SSIS in 45 hours. • Built data warehouse ETL pipelines using Pentaho & Kettle for high volume Liquor Retail stores. • Saved 20+ hours/week by Automating core DBA tasks using dynamic SQL.		

Education

Bachelor of Engineering in Electronics & Communication Engineering	07 2006 - 06 2010
Rustamji Institue of Technology	Gwalior, Madhya Pradesh

Awards and Honors

Tech Titan , AngelOne for 10x Performance Optimization on Prod SQLServer.	2022
Sapphire , United Health Group for Innovation and automations.	2017

Projects

SQLMonitor: Open source Enterprise grade SQLServer monitoring tool	01 2021 - Present
• Built using TSQL, PowerShell, Python, and Grafana. • Successfully monitoring 500+ SQLServers across environments. • Observability alerts to Slack, PagerDuty and Email • Inbuilt auto action to Clear & Resolve	
AI Agent: AI Agent to help application users troubleshoot database performance issues interactively though portal & Slack	10 2025 - Present
• Built using Python, LangChain, Ollama, and SQLMonitor • Successfully handling developers/application users in Database Performance tuning	
HadrSync: PowerShell module that synchronizes all objects across Replicas in Availability Groups	01 2021 - Present
• Ensures zero sync issues during failovers/Drs. • Detects & synchronizes even delta changes like changes in passwords, definition etc.	

Availability

Notice Period: 7 Days
Relocation: Open to Relocation
Remote: Open to remote opportunities

FINAL NOTE

I have problem-solving mindset and love designing efficient database systems and solving complex performance challenges in collaboration with various tech teams. I help organisations build robust, fully automated infrastructure with PowerShell, Python and Ansible.
